Consulting Services

1. ISO 27001-Information Security Management

ISO 27001:2013 is the international standard that provides a framework for Information Security Management Systems (ISMS) to provide continued confidentiality, integrity and availability of information as well as legal compliance.

2. ISO 22301 - Business continuity management

In the event of an emergency, many businesses and organizations must have the ability to mitigate damage and continue operating. ISO 22301 is the international standard for Business Continuity Management (BCM).

3. ISO 27701 – Privacy information management

This newly published information security standard provides guidance for organizations looking to put in place systems to support compliance with GDPR and other data privacy requirements.

4. ISO 27040 – Storage Security

offers comprehensive technical guidance on how organisations should identify an acceptable level of risk reduction through a well-proven, consistent approach to data storage security preparation, design, documentation and implementation.

5. ISO 27033 – IT security

provides an overview of network security and related definitions. It defines and describes the concepts associated with, and provides management guidance on, network security.

6. ISO 27018 – Protection of personally identifiable information in public cloud

gives generic agreed guidance on information security categories. The standard targets public cloud services providers that act as PII processors.

7. ISO 27019 – Information security for process control in the energy industry

This standard is intended to help organizations in “the energy industry” (non-nuclear) interpret and apply ISO/IEC 27002 in order to secure their electronic process control systems.

8. ISO 9001 – Quality Management

ISO 9001 is the internationally recognized standard for Quality Management Systems (QMS).

9. ISO 20000 – IT Service management

It enables IT departments to ensure that their ITSM processes are aligned with both the needs of the business and international best practice.

10. SAMA Cyber Security Compliance

Central monetary authority supervising the banking and insurance sectors and the implementation of the law to help enhancing the stability of the currency.

11. GDPR Compliance

Is a regulation in EU law on data protection and privacy in the European Union (EU) and the European Economic Area (EEA). It also addresses the transfer of personal data outside the EU and EEA areas.

GDPR.EU

12. CITC Compliance

The Commission is "Universally available, high quality and affordable communications and information technology services"

Testing Services

CONTINUOUS VA/PT

ATCL penetration testing walks through a series of tasks cultivated specially for identification and simulated exploitation of vulnerabilities the publicly exposed IPs and it is carried out essentially to determine security vulnerabilities that could be discovered and exploited by someone who may not have access to the internal design and code of the application.

Web App

Web Application security testing is the process of actively evaluating the information security measures that the application possesses. There are a number of ways that this can be undertaken, but the most common procedure is that the security measures are analysed for design weaknesses, technical flaws and vulnerabilities; the results are then delivered comprehensively in a report, to Executive, Management and Technical audiences.

Mobile App

ATCL Mobile Security Testing services can protect you from the latest mobile security threats. They have been specifically designed to identify configuration and deployment flaws associated with integrating mobile solutions into a corporate environment, and provide detailed remediation advice.

Code Review

Code review is probably the single-most effective technique for identifying security flaws. When used together with automated tools and manual penetration testing, code review can significantly increase the cost effectiveness of an application security verification effort.

Assessment Services

Cyber Security Risk Assessment

A cyber threat can be intentional or unintentional, targeted or non-targeted, and can come from a variety of sources, including foreign nations engaged in espionage and information warfare; criminals; hackers; virus writers; and disgruntled employees and contractors working within an organization.

Other Professional Services

We also provide policies, procedures, strategy, governance framework development services.

Contact us for a scoping assessment and proposal. (security@atclarabia.com)
